

DryDocs UI — print-and-annotate wireframes

Source: UI-WIP/drydocs-landing-dark.html Branch: feature/ui-dark-landing-myapps 2026-07-06

How to use this pack

1. Print on standard US Letter, portrait, 100% scale (no 'fit to page').
2. Mark up in dark pen: cross out, move with arrows, add boxes, rewrite labels.
3. Number every change (1) (2) (3) and explain it on the ruled note lines.
4. Scan or photograph each page (flat, even light) and drop images into Claude.
5. Ask Claude: 'Transcribe every annotation into a numbered change list before editing anything' - approve the list, then have it applied to the mockup.

Reading the wireframes

Solid box = component / panel Crossed box = image or diagram placeholder

Thick gray bars = text placeholder Dashed box = conditional / signed-in only

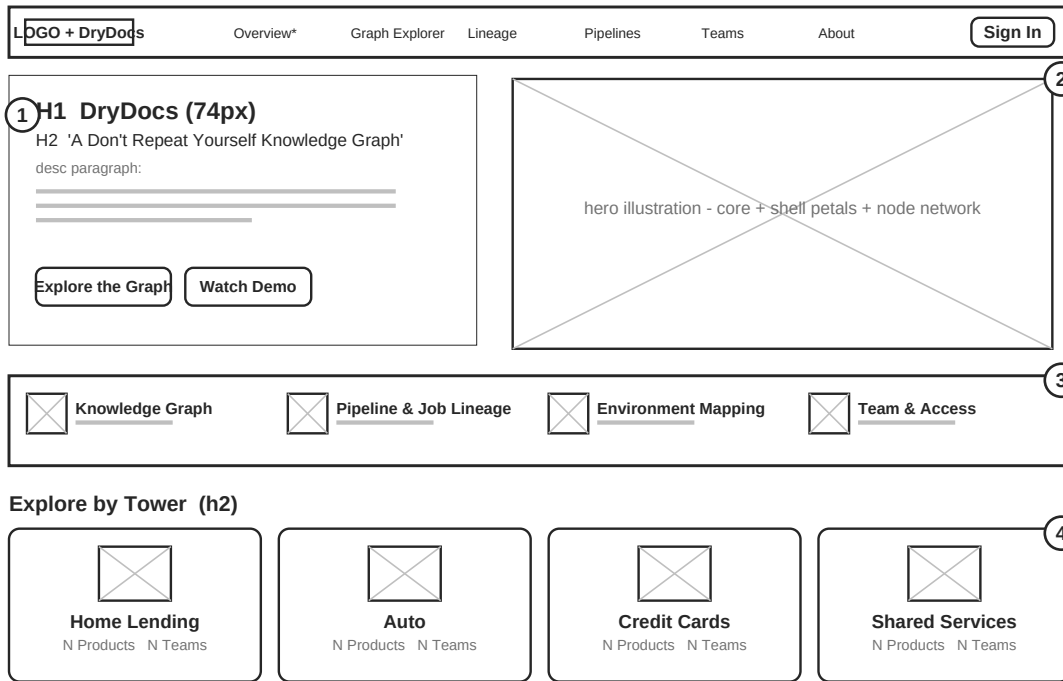

Circled numbers = existing regions you can reference in notes ('move 2 above 1')

These pages show structure only - colors, exact type and data live in the HTML mockup.

View 1 - Landing (Overview)

drydocs-landing-dark.html · feature/ui-dark-landing-myapps · printed 2026-07-06 · draw changes in pen, number them, scan back

click tower card -> View 2 (drill-down)

NOTES (number them)

Markers: 1=hero copy 2=hero art 3=feature strip 4=tower

MORE NOTES / SKETCH

drydocs-landing-dark.html · feature/ui-dark-landing-myapps · printed 2026-07-06 · draw changes in pen, number them, scan back

see design-review.md: matrix columns need rework

Markers: 1=action bar 2=cypher 3=graph 4=tables 5=ma

drydocs-landing-dark.html · feature/ui-dark-landing-myapps · printed 2026-07-06 · draw changes in pen, number them, scan back

Markers: 1=action bar 2=app rollout 3=Control-M lineage

Component key - names to use in annotations

drydocs-landing-dark.html - feature/ui-dark-landing-myapps - printed 2026-07-06 - write these names next to your pen markups so changes map straight to code

Landing (#landing)

nav / .nav-in	sticky top bar
.logo	logo mark + wordmark
.nav-links	Overview / Explorer / Lineage / Pipelines / Teams / About
.signin	Sign In button
.hero	2-column hero grid
.hero h1 / h2	title 74px + tagline
.desc	hero paragraph
.btn-primary	'Explore the Graph' -> drill(home)
.btn-ghost	'Watch Demo' (dead link)
.hero-art	SVG: core + petals + node net
.features / .feat	feature strip, 4 items
.explore	'Explore by Tower' section
.tower x4	cards from TOWERS data: home / auto / cards / shared

My Apps (#myapps)

.userchip	jdoe4821 - access from ServiceNow
rollup panel	app cards -> CTO tower (SVG)
app card	id + SNOW badge + name + dev team + PAT badge
Control-M panel	folders + job chains (SVG), CONTAINS / TRIGGERS edges
.foot	data provenance line

Tower drill-down (#drill)

.d-bar	action bar under nav
.back	'Back to Overview'
#dTitle	view heading (tower name)
.tag	EXAMPLE DATA badge
#myAppsBtn	My Apps button (home only)
.panel / .p-head	bordered panel + header strip
#dCypher	Cypher lineage query pane
#dGraph	graph result SVG
#dSchema	schema definition table
#dPreview	row preview table
.matrix	inter-tower dependency matrix
.foot	footer disclaimer

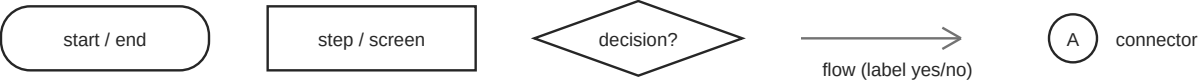

JS / data (script block)

TOWERS	per-tower stats, schema, cypher, preview rows, graph nodes/edges
showLanding()	return to landing
showDrill(key)	open tower drill-down
showMyApps()	open user view
renderGraph(g)	draws #dGraph from data
spark[]	sparkline data (not rendered yet)

Example annotation: "(3) move #myAppsBtn into nav next to .signin when signed in"

Flow & decision-tree sketch page

drydocs-landing-dark.html - feature/ui-dark-landing-myapps - printed 2026-07-06 - - draw a user flow or logic tree; shapes below are the vocabulary Claude will read back

Grid area for sketching flowcharts.

Sketch page

drydocs-landing-dark.html - feature/ui-dark-landing-myapps - printed 2026-07-06 - free space - anything drawn here gets transcribed on scan-back
